

ENVIRONMENT

SOCIAL ROBOT CO-DESIGN CANVASES

What is the robot's context of operation?
You can use the "Ecosystem" canvas to dive deeper into this topic.

Where

What place?
Does it change?

Mercer General ED - but no longer just the triage desk. If it's carried, the nurse could be using it at the desk, at the bedside, walking the queue, or wherever the patient actually is.

User(s)

Who is using the robot?

ED triage nurses (e.g. Sister Alleyne's team) - trained clinical staff, one nurse actively using the system per triage assessment.

When

What time of day?
Does it change?

24/7 — triage never stops.

Secondary user(s)

Are there secondary users?
E.g. teachers that help students use a robot.

Shift-lead nurses and the Integration Review Board, who don't operate the tablet directly but review override logs and outcomes afterward. Possibly also whoever handles device maintenance/IT support at Mercer.

Data collection

Does the robot collect data from its environment?
How is it stored?

Yes — patient vitals, presenting complaint, and (if EHR-integrated) recent record data, entered or pulled at the point of triage. Stored via Mercer's existing EHR system where possible; override reasons and timestamps logged separately for audit purposes

TRADE-OFF:

More data collection requires more attention to data security.

Simultaneous users

How many users should be able to use the robot simultaneously?

TRADE-OFF:

More simultaneous users requires a more sophisticated robot.

1 nurse per tablet/ device

External sensors and actuators

Does the robot use external sensors?
Does it have external actuators, such as lights or limbs?

None

Connection to systems

Is the robot connected to external systems, such as software, databases, or other robots?
How does it use these systems?

Yes — connects to Mercer's EHR (pull patient data) and writes back override/audit logs.
