

FORM

SOCIAL ROBOT CO-DESIGN CANVASES

What are the robot's outward qualities? If an existing robot is used, are its qualities modified?

Draw a picture

What does the robot look like?
Is it attached to something?
Does it move around?
Can its appearance be modified?

Appearance modified:
fixed, tablet device, neutral interface,
not customisable.

Appearance

Is the robot more machine or lifelike? Is it human-shaped, animal-shaped, or abstract?

TRADE-OFF:

Robots that appear more human and lifelike are expected to be more sophisticated in features.

Size

How big is the robot?

Character of movement

What is the robot's movement like?

Voice & sounds

Does the voice have a gender or an age? What are pitch, speed and prosody like? Is the voice always the same?
Does the robot make sounds: music, "beep"s, animal noises?
When are these sounds heard?

Voice: none - no gendered or personified voice, deliberately, to avoid anthropomorphising the tool
Sounds/beep: no audio reliance at all - ED noise regularly exceeds 70dB, so audio isn't a dependable channel.

When heard: only exception is an optional haptic (vibration) pulse as a supplementary alert cue - not a sound, and not primary.

Mobility

Does the robot move across space? Does it move in place?

Portable - moves around with ED nurse

Visual cues

Does the robot have expressions, lights, a screen or other visual elements?

Colour-coded badge with an icon/shape differentiator (never colour alone) - this is your main visual cue.

Numeric score (1-5) displayed alongside it.
Plain-language contributing features shown under the score.

Low-confidence flag when applicable.

A status strip (Live / EHR offline / Wi-Fi lost) so the nurse can see system state at a glance.

Touch & smell sensations

Is the robot soft or rough, warm or cold?

How does the robot smell?

Touch and smell are especially important in close interactions.
